PMC-5151 wins 2014 Top 10 Most Competitive Products Award at the China Automation Industry Annual Conference

The ICP DAS PMC-5151 wins the **2014 Top 10 Most Competitive Product Award** at the China Automation Industry Annual Conference. The [PMC-5151](#) is a web-based intelligent Power Meter Concentrator that offers webpage interface, and features power data collection, logic control, power demand management, data logger and alarm notification functions. [PMC-5151](#) allows connections to ICP DAS Smart Power Meters via RS-485 or Ethernet interface to read the power data of the devices measured by the power meters; and then real-time record the power values in the data logger file. PMC-5151 also provides data logger file auto send-back function; together with PMC Data Server software or SCADA software, it offers an easy solution to the collection and analysis of your power data.

The **China Automation Industry Annual Conference (CAIAC)** is hosted by the Chinese Association of Automation (CAA). Its mission is to keep track of every stage of the development of the Chinese automation industry, to award the individuals and businesses who have made great contribution to the Chinese automation industry, and to showcase the revolutionary automation products and case studies of the successful industry solutions. It combines the automation industry and research, promoting a fair, open, and professional environment to showcase the progress of the Chinese automation industry.

The China Automation Industry Annual Conference (CAIAC) is a public event for the Chinese automation industry. It pays great attention to the development of the automation industry in China. It aims to speed up the transformation of the Chinese industries with innovative technology.
